3M HealthCare

The 3M™ Surgical Drape range…

From the leader in Medical Adhesive and Drape Materials

Surgeons all over the world rely on 3M for many of their draping needs. 3M has made use of innovative technologies to create a highly advanced range of single-use surgical drapes, for the highest level of performance and reliability.

Cost Savings

The 3M surgical drape range consists of both specialised packs and individual drapes for cost effective and flexible draping solutions.

Customer Support

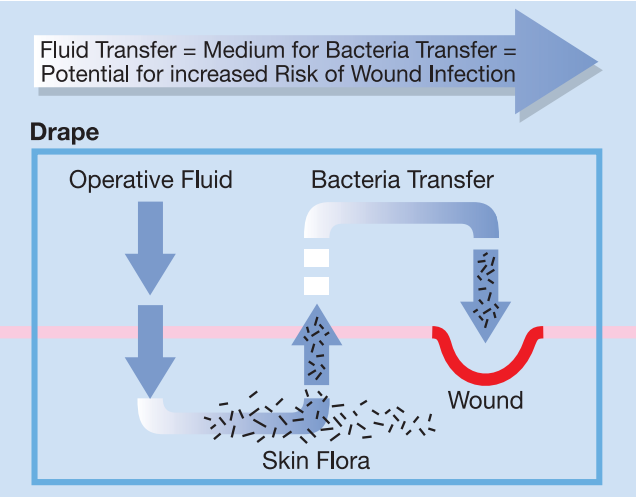

3M provides a high-quality and dependable level of service to thousands of health care workers each day. This means offering you the very best in customer service; a fully dedicated team of experienced theatre nurses will assist you in meeting the fast changing demands of today's surgical procedures.

Unique Drape Exchange Scheme

We recognise that lists and procedures are subject to last minute changes. Therefore your 3M representative will be happy to exchange any uncontaminated opened and unused 3M surgical drape or surgical gown, free of charge, for a new sterile drape or gown.

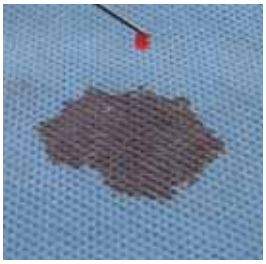

…the role of Surgical Drapes

Surgical Drapes are designed to establish and maintain a sterile field. It is very important to select a surgical drape that provides reliable performance. To achieve the best surgical outcomes, look for surgical drapes with these qualities:

3M™ Steri-Drape™ 9000 Surgical Drapes

Steri-Drape 9000 material consists of a laminate of polypropylene fibres and a polyethylene film. These materials are by-products of the oil industry. There is no cellulose in these drapes, which means that no trees are used in their manufacture. The products do not present a significant risk to the environment when incinerated after use and are broken down to carbon dioxide and water.

Impervious to Strikethrough

A drape that allows fluid transfer, and thus bacteria transfer, compromises the sterile field, which increases the risk of wound infection. That is why a drape that is impervious to liquid strikethrough is so important.

Fluid Control Features

3M surgical drapes effectively control and contain fluid. This not only reduces potential exposure to infectious body fluids, but keeps the patient dry which can help reduce turnaround time between procedures. Many 3M surgical drapes have fluid collection pouches, and the 3M™ Steri-Drape™ 9000 Range of drapes is absorbent.

Reliable Adhesion

3M is a leader in adhesive technology, and has applied this expertise to provide surgical drapes with consistently reliable adhesion to the skin or wound edge. Even during heavy retraction and irrigation, 3M incise drapes adhere securely to wound edges, providing a barrier to bacteria on the skin.

Superior Strength and Comfort

The material of the Steri-Drape 9000 range of surgical drapes is strong enough to withstand the most arduous procedures, and even the heaviest surgical instruments can be placed on them without concern. They are also soft and pliable for both patient and staff.

3M Range

3M surgical drapes are available individually and in specialised packs to cover most surgical procedures. The contents of each draping pack are tailored to match the requirements of each and every procedure. Fully customised packs are also available, to save time and minimise waste.

3M Service and Support

Clinical Nurse Advice

Our people; your support team

3M provides a high quality and dependable level of service to thousands of health care workers each day. This means offering all the support possible to help meet the fast changing demands of today's surgical procedures.

3M's commitment to providing the very best in customer service is reflected in the fact that we have a fully dedicated team of experienced theatre nurses in addition to your account manager, who ensure that we provide on-going support to our customers. The team can support you with in-house training and can also deliver a number of training packages.

Behind your immediate 3M account support team, there exists a full community of technical and quality assurance employees. Our UK based, experienced team of Customer Services staff are very experienced in the Health Care market. We also have a Technical Services Team who are available 24 hours a day to cover technical emergencies out of hours.

3M Environmental Care

3M has an approach to the environment based on prevention at source. The company believes that it is better to prevent pollution rather than remove it after it has been created. This concept means applying more intelligence to produce high-value products with fewer resources and fewer environmental impacts.

The 3M environmetal policy involves:

- Preventing pollution at source, whenever possible.
- Developing products that have a minimum effect on the environment.
- Conserving natural resources through reclamation and other appropriate methods.
- Meeting and sustaining government regulations.
- Participating in government-led environmental initiatives, wherever possible.

With strong environmental management systems in place, 3M has a long history of continuous improvements to minimise the impact of our manufacturing processes and products on the global environment. Over the last 6 years our global environmental progress has included a 26% improvement in energy efficiency, 25% reduction in waste, 58% reduction in volatile organic air emissions and the successful completion of 895 'Pollution Prevention Pays' projects.

Life Cycle Management (LCM) is an integral part of our environmental activities. Instead of only focusing on the manufacturing process to control environmental, health, safety and energy effects, the spotlight is now on products throughout their entire life cycle, from manufacturing through to customer use and disposal. 3M has adopted a Life Cycle Management Policy requiring all new and existing products to undergo a LCM review, which must be completed by 2010.

In the UK and globally, 3M has been recognised for its commitment to the environment through a number of prestigious awards, including both a Stratospheric Ozone Protection Award and a 2006 Energy Star Award for Sustained Excellence in Energy Management from the US Environmental Protection Agency.

3M™ Incise Drapes

3M™ Ioban™ 2 Antimicrobial Incise Drapes

- Contain iodophor which is slowly released on to the skin surface giving continuous and controlled antimicrobial activity throughout the surgical procedure.
- Have a high moisture vapour transmission rate which allows the skin to "breathe" ensuring improved adhesion throughout the longest procedures.
- Are highly conformable to body contours. The unique low memory stretch allows limb mobilisation or heavy retraction with reduced tension to the skin.
- Have superb adhesion right up to the wound edge.

3M™ Ioban™ EZ Antimicrobial Incise Drapes

- In addition, the Ioban EZ incise drape is also available which includes the "easy-delivery" drape application feature (except 6635), including a removable cardboard strip for greater stability.

3M™ Steri-Drape™ 2 Incise Drapes

- Are made of a breathable film which provides superior adhesion.
- Have low memory stretch.
- Conform to body contours and stretch to allow limb manipulation.
- Reduce or eliminate the need for towel clips by stabilising surgical drape sheets.

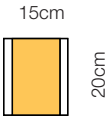

3M™ Steri-Drape™ Incise Drapes

- Are the original incise drapes which are totally impermeable, have a pressure sensitive adhesive and provide a sterile operating surface.
- Reduce or eliminate the need for towel clips by stabilising surgical drape sheets.

General Surgery Drapes

As general surgery procedures vary so much the drapes used need to be adaptable and cater for the challenges likely to be met, such as large volumes of blood and irrigation fluids, heavy retraction during major abdominal procedures and procedures that may last for several hours.

Impervious to Strikethrough

- A drape that allows fluid transfer, and thus bacteria transfer, compromises the sterile field, which increases the risk of wound infection. That is why a drape that is impervious to liquid strikethrough is so important.

Fluid Control Features

- 3M surgical drapes effectively control and contain fluid. This not only reduces potential exposure to infectious body fluids, but keeps the patient dry which can help reduce turnaround time between procedures. Many 3M surgical drapes have fluid collection pouches, and the 3M™ Steri-Drape™ 9000 Range of drapes is absorbent.

Superior Strength and Comfort

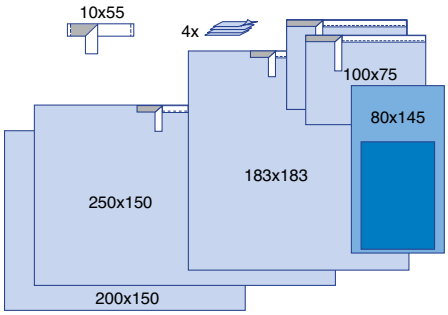

- The material of the Steri-Drape 9000 range of surgical drapes is strong enough to withstand the most arduous procedures, and even the heaviest surgical instruments can be placed on them without concern. They are also soft and pliable for both patient and staff.

3M™ Absorbent Impervious Fabric is:

- Low-linting, non-woven, absorbent fabric laminated to a plastic film
- Prevents fluids from running off the drape surface
- Absorbent and impervious throughout the entire drape
- Impervious to strikethrough
- Fluid control features
- Superior strength and comfort

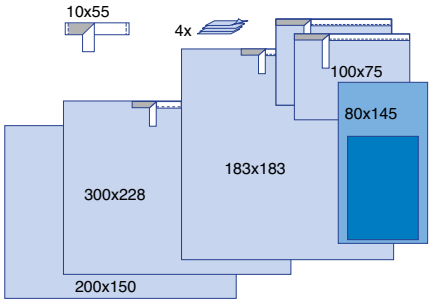

3M™ Ioban™ 2 Antimicrobial Incise Drapes

- Ioban 2 antimicrobial incise drapes contain iodophor which is slowly released onto the skin surface giving continuous and controlled antimicrobial activity throughout the surgical procedure. An Ioban incise area is featured in some speciality drapes. Ioban incise drapes are also available as separate items.

3M™ Orthopaedic Drapes

Orthopaedic surgery requires a draping system that maintains a sterile field throughout the procedure and reliably adheres to the skin to reduce the likelihood of drapes moving over long periods of time. Heavy manipulation often occurs during orthopaedic procedures and drapes need to be able to withstand this.

Superior Strength and Comfort

- The material of the 3M™ Steri-Drape™ 9000 Range of surgical drapes is strong enough to withstand the most arduous procedures, and even the heaviest surgical instruments can be placed on them without concern. They are also soft and pliable for both patient and staff.

Impervious to Strikethrough

- A drape that allows fluid transfer, and thus bacteria transfer, compromises the sterile field, which increases the risk of wound infection. That is why a drape that is impervious to liquid strikethrough is so important.

Reliable Adhesion

- 3M is a leader in adhesive technology, and has applied this expertise to provide surgical drapes with consistently reliable adhesion to the skin or wound edge. Even during heavy retraction and irrigation, 3M incise drapes adhere securely to wound edges, providing a barrier to bacteria on the skin.

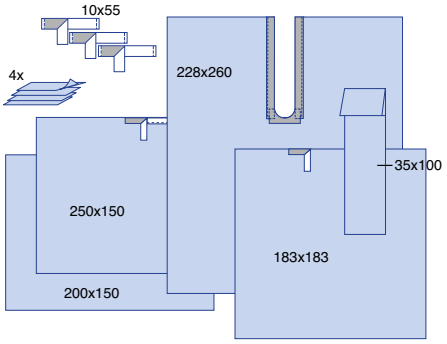

Fluid Control Features

- 3M surgical drapes effectively control and contain fluid. This not only reduces potential exposure to infectious body fluids, but keeps the patient dry which can help reduce turnaround time between procedures. Many 3M surgical drapes have fluid collection pouches, and the Steri-Drape 9000 range of drapes is absorbent.

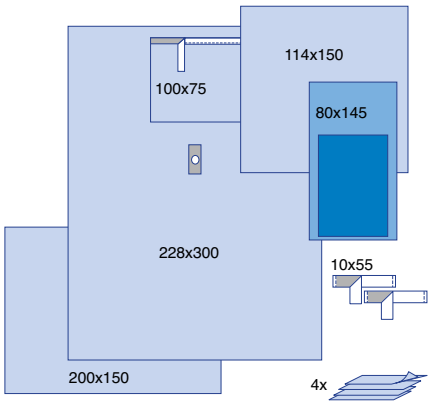

3M™ Ioban™ 2 Antimicrobial Incise Drapes

- Ioban 2 antimicrobial incise drapes contain iodophor which is slowly released onto the skin surface giving continuous and controlled antimicrobial activity throughout the surgical procedure. An Ioban incise area is featured in some speciality drapes. Ioban incise drapes are also available as separate items.

3M™ Cardiovascular Drapes / Cardiac Catheterisation Drapes

Most cardiothoracic procedures require drapes that can withstand heavy manipulation and reduce the likelihood of infection. There is often a large amount of fluid involved with these procedures and therefore drapes used should have fluid control features. Drapes that contain antimicrobial features can reduce the risk of surgical site infection which is very important in this type of surgery.

Superior Strength and Comfort

- The material of the 3M™ Steri-Drape™ 9000 Range of surgical drapes is strong enough to withstand the most arduous procedures, and even the heaviest surgical instruments can be placed on them without concern. They are also soft and pliable for both patient and staff.

Impervious to Strikethrough

- A drape that allows fluid transfer, and thus bacteria transfer, compromises the sterile field, which increases the risk of wound infection. That is why a drape that is impervious to liquid strikethrough is so important.

Fluid Control Features

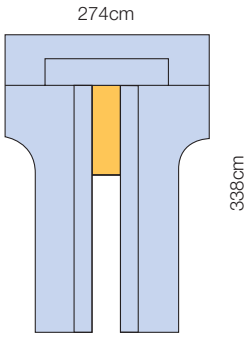

- 3M surgical drapes effectively control and contain fluid. This not only reduces potential exposure to infectious body fluids, but keeps the patient dry which can help reduce turnaround time between procedures. Many 3M surgical drapes have fluid collection pouches, and the Steri-Drape 9000 range of drapes is absorbent.

3M™ Ioban™ 2 Antimicrobial Incise Drapes

- Ioban 2 antimicrobial incise drapes contain iodophor which is slowly released onto the skin surface giving continuous and controlled antimicrobial activity throughout the surgical procedure.
  An Ioban incise area is featured in some speciality drapes.
  Ioban incise drapes are also available as separate items.

3M™ Obstetrics and Gynaecology Drapes

Some obstetric procedures such as caesarean section present challenges for a draping system. Large amounts of blood and amniotic fluid present mean a drape must have excellent fluid control features to ensure the patient remains dry throughout the procedure and reduces the likelihood of fluid spillages that could be a health and safety hazard to healthcare workers. Ease of application is imperative as these procedures are often emergencies.

Fluid Control Features

- 3M surgical drapes effectively control and contain fluid. This not only reduces potential exposure to infectious body fluids, but keeps the patient dry which can help reduce turnaround time between procedures. Many 3M surgical drapes have fluid collection pouches, and the 3M™ Steri-Drape™ 9000 Range of drapes is absorbent.

Superior Strength and Comfort

- The material of the Steri-Drape 9000 range of surgical drapes is strong enough to withstand the most arduous procedures, and even the heaviest surgical instruments can be placed on them without concern. They are also soft and pliable for both patient and staff.

Impervious to Strikethrough

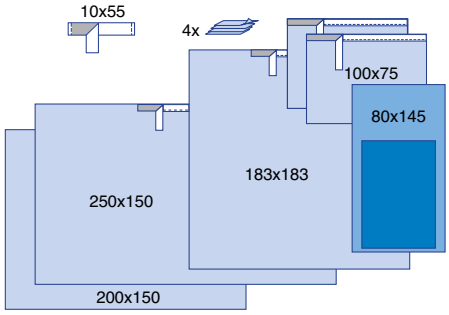

- A drape that allows fluid transfer, and thus bacteria transfer, compromises the sterile field, which increases the risk of wound infection. That is why a drape that is impervious to liquid strikethrough is so important.

3M Range

- 3M surgical drapes are available individually and in specialised packs to cover most surgical procedures. The contents of each draping pack are tailored to match the requirements of each and every procedure.
- Fully customised packs are also available, to save time and minimise waste.

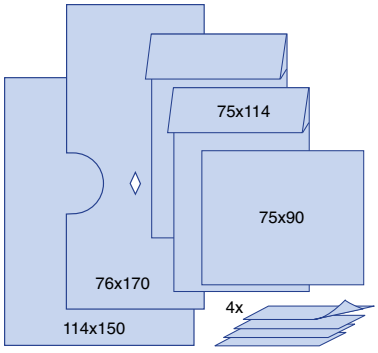

3M™ Ioban™ 2 Antimicrobial Incise Drapes

- Ioban 2 antimicrobial incise drapes contain iodophor which is slowly released onto the skin surface giving continuous and controlled antimicrobial activity throughout the surgical procedure. An Ioban incise area is featured in some speciality drapes. Ioban incise drapes are also available as separate items.

3M™ Urology Drapes

Large amounts of fluids during urological procedures require drapes that can effectively control this fluid and maintain a safe environment for healthcare workers. Drapes that minimise the amount of preparation time before surgery are an advantage as often there is a quick turnaround time between procedures.

Fluid Control Features

- 3M surgical drapes effectively control and contain fluid. This not only reduces potential exposure to infectious body fluids, but keeps the patient dry which can help reduce turnaround time between procedures. Many 3M surgical drapes have fluid collection pouches, and the 3M™ Steri-Drape™ 9000 Range of drapes is absorbent.

3M Range

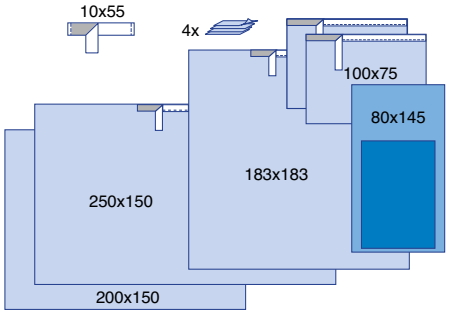

- 3M surgical drapes are available individually and in specialised packs to cover most surgical procedures. The contents of each draping pack are tailored to match the requirements of each and every procedure. Fully customised packs are also available, to save time and minimise waste.

Impervious to Strikethrough

- A drape that allows fluid transfer, and thus bacteria transfer, compromises the sterile field, which increases the risk of wound infection. That is why a drape that is impervious to liquid strikethrough is so important.

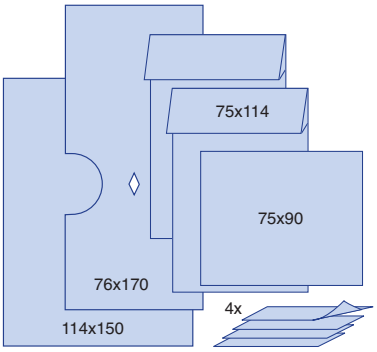

3M™ Ioban™ 2 Antimicrobial Incise Drapes

- Ioban 2 antimicrobial incise drapes contain iodophor which is slowly released onto the skin surface giving continuous and controlled antimicrobial activity throughout the surgical procedure. An Ioban incise area is featured in some speciality drapes. Ioban incise drapes are also available as separate items.

3M™ Ophthalmic Drapes

Ophthalmic procedures are often carried out under local anaesthesia and therefore the drapes used need to be lightweight and comfortable for the patient. 3M ophthalmic drapes are made from a lightweight and breathable material that allows fluid to run away from the operative site into specifically designed fluid collection pouches, ensuring the drapes remain dry and the patient is comfortable.

Fluid Control Features

- 3M surgical drapes effectively control and contain fluid. This not only reduces potential exposure to infectious body fluids, but keeps the patient dry which can help reduce turnaround time between procedures.

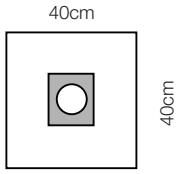

3M Range

- 3M surgical drapes are available individually and in specialised packs to cover most surgical procedures. The contents of each draping pack are tailored to match the requirements of each and every procedure. Fully customised packs are also available, to save time and minimise waste.

3M™ Head and Neck Drapes

Head and neck surgery procedures pose a number of challenges for a draping system. Procedures on the ears, nose and throat can be difficult to drape and therefore requires a versatile but comfortable range. Specific needs of some procedures will require speciality drapes, drapes with reliable adhesion so they do not move and, where required, fluid control features.

Superior Strength and Comfort

- The material of the 3M™ Steri-Drape™ 9000 Range of surgical drapes is strong enough to withstand the most arduous procedures, and even the heaviest surgical instruments can be placed on them without concern. They are also soft and pliable for both patient and staff.

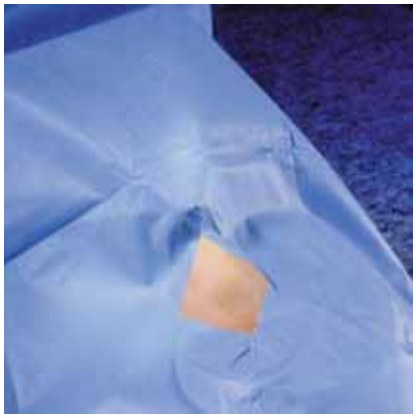

3M Range

- 3M surgical drapes are available individually and in specialised packs to cover most surgical procedures. The contents of each draping pack are tailored to match the requirements of each and every procedure. Fully customised packs are also available, to save time and minimise waste.

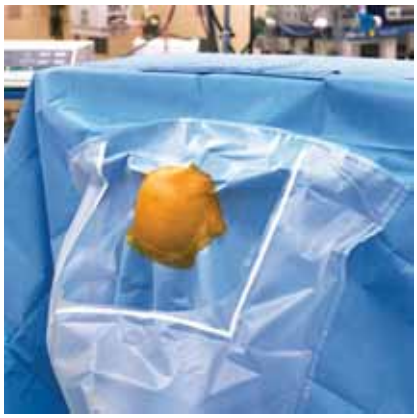

Reliable Adhesion

- 3M is a leader in adhesive technology, and has applied this expertise to provide surgical drapes with consistently reliable adhesion to the skin or wound edge. Even during heavy retraction and irrigation, 3M incise drapes adhere securely to wound edges, providing a barrier to bacteria on the skin.

Fluid Control Features

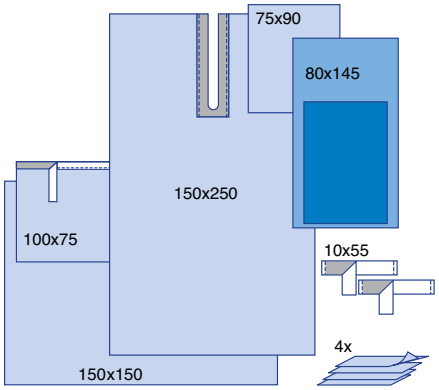

- 3M surgical drapes effectively control and contain fluid. This not only reduces potential exposure to infectious body fluids, but keeps the patient dry which can help reduce turnaround time between procedures. Many 3M surgical drapes have fluid collection pouches, and the Steri-Drape 9000 range of drapes is absorbent.

3M™ Ioban™ 2 Antimicrobial Incise Drapes

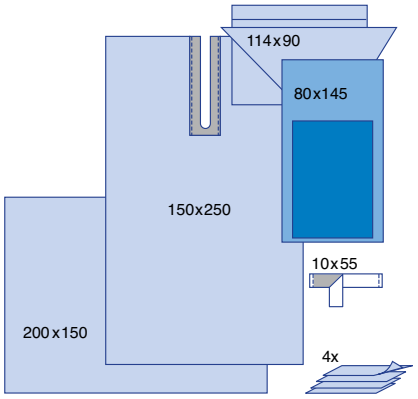

- Ioban 2 antimicrobial incise drapes contain iodophor which is slowly released onto the skin surface giving continuous and controlled antimicrobial activity throughout the surgical procedure.
  An Ioban incise area is featured in some speciality drapes.
  Ioban incise drapes are also available as separate items.

3M™ Neurosurgery Drapes

Neurosurgical procedures are often long and involve large amounts of blood and irrigation fluids. Drapes that can adequately collect this fluid and maintain a safe environment for healthcare workers are an advantage and will ensure the risk of infection is also reduced. Ease of application is also imperative as these procedures are often emergencies.

Fluid Control Features

- 3M surgical drapes effectively control and contain fluid. This not only reduces potential exposure to infectious body fluids, but keeps the patient dry which can help reduce turnaround time between procedures.

Superior Strength and Comfort

- The material of the 3M™ Steri-Drape™ 9000 Range of surgical drapes is strong enough to withstand the most arduous procedures, and even the heaviest surgical instruments can be placed on them without concern. They are also soft and pliable for both patient and staff.

Impervious to Strikethrough

- A drape that allows fluid transfer, and thus bacteria transfer, compromises the sterile field, which increases the risk of wound infection. That is why a drape that is impervious to liquid strikethrough is so important.

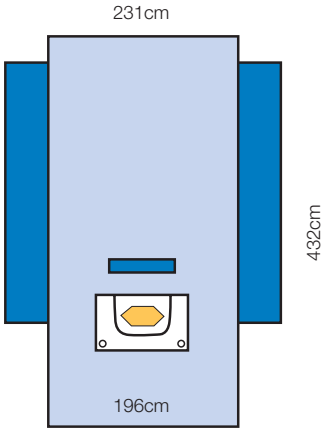

3M Range

- 3M surgical drapes are available individually and in specialised packs to cover most surgical procedures. The contents of each draping pack are tailored to match the requirements of each and every procedure. Fully customised packs are also available, to save time and minimise waste.

3M Health Care
Unique Drape Exchange Scheme

3M Health Care recognises that lists and procedures are subject to last minute changes. Therefore your 3M representative will be happy to exchange any uncontaminated opened and unused 3M surgical drape or surgical gown, free of charge, for a new sterile drape or gown.

For further information, samples, or to arrange a free demonstration of gowns and draping systems, contact Customer Services on 01509 613151, or email infectionprevention.uk@mmm.com.

3M Health Care not only provides quality products but also appropriate support services which enable correct product use and optimised outcomes.

3M strives to contribute to one of the ultimate goals of all health care organisations: infection free patients and health care professionals, throughout the continuum of care.

For further information on 3M products please visit our website:
